Sunrise Antivirus

DATA ENCRYPTION & DECRYPTION

DATA ENCRYPTION

SUNRISE ANTIVIRUS priority is to SECURE DATA/INFORMATION from Un Authorised access.

Data Encryption translates data into another form, or code, so that only people with access to a secret key (formally called a decryption key) or Password can read it. Encrypted data is commonly referred to as cipher text, while unencrypted data is called plaintext.

Currently, Encryption is one of the most popular and effective data security methods used by organizations.

Two main types of data encryption exist – Asymmetric encryption, also known as public-key encryption, and symmetric encryption.

Sunrise Antivirus

DATA BACKUP MANAGEMENT

Nowadays, backing up your data is one of the safest ways to ensure that you're being proactive about your data's security. This way, if disaster strikes, you can rest easy and know your information still exists elsewhere.

With the help of **SUNRISE** Data Security techniques and backup software, you can take the initiative to protect yourself before anything drastic happens.

SUNRISE – BACKUP MANAGEMENT

helps you to take backup to multiple storages or destinations at a Single Click also helps with Auto Backup right from every Minute.
